

## DESCRIPTION

Split-chamber centrifugal pump with double suction radial impeller and balanced axial hydraulic forces. Option for vertical execution.

Double-suction impeller for improved suction capacity. Axially split housing design with in-line suction and discharge flanges in the lower housing. Housing wear rings with optional impeller wear rings. Double volute available for larger sizes. Option for vertical installation (SCPV).

### Applications

Supplies for industry, firefighting installations, drinking water plants and refrigeration circuits for clean or lightly charged fluids.

### Materials

Cast iron, bronze, stainless steel or nodular.

### Flanges

DIN - 2632 PN 10

DIN - 2633 PN 16
